

WHAT'S NEW?

Masons have made significant progress on the brick facade of the addition in February. Window frames and glass are being installed at the exterior walls surrounding the two courtyards, and structural steel is almost finished in the cafeteria / commons area. With steel framing nearly complete, the shape of the addition is reaching its final form!

Building systems and drywall are being installed at the addition. Coolers and hoods are also being put into place in the new kitchen. Lastly, all three staircases connecting the two floors of the addition have been installed. Please see below and the following page for photos from the progress thus far.
