

WHAT'S NEW?

Over winter break, staff members were able to tour the addition at Mount Horeb High School and see the progress that has been made over the last nine months of construction. Since early December, exterior windows inside the courtyard have been framed, preparing for window installation. Steel framing for the future cafeteria has also begun, and exterior masonry work is ongoing.

In the addition's interior, wall framing on the first and second floors continues, with building system installation following behind shortly. All of the concrete slabs for first floor corridors have been completed, leaving concrete slabs for the cafeteria / commons area and tech ed classrooms to be the last poured. Please see below and the following page for photos from the progress thus far.
